Pelleted	Uniform in every bite
Great Feed for High Stressed Cattle	High in Fiber and Medicated for cattle that could possibly have a compromised immune system
Medicated	Bovatec
TDN	75%
Bag Size	50 lbs
Tag Color	Pink

Performance Stress and Receiving Ration is a feed that is designed for high stress cattle, either from weaning or from the stress of the livestock market experience. The ration is a pelleted feed consisting of cottonseed hull, citrus pulp, cracked corn, 16% Performance Extra pellets and a complete stress mineral package. This stress ration contains a PLC Starter Mineral with Bovatec and Selenium Yeast.

Performance Stress and Receiving Ration is a high fiber and highly fortified feed for high stressed cattle that could possibly have or had a compromised immune system. This feed will help buffer the digestive tract and get Bovatec in those animals so there is reduced chance of health issues. Fiber from cottonseed hulls and citrus pulp in conjunction with the “live” yeast add increased palatability, so more cattle start on feed faster. Performance Stress and Receiving Ration is a truly farm inspired feed. It was designed with the help of consulting veterinarians and has been fed to our cattle for 15 years. This is a farm tested and proven program for high stressed cattle.
